

Does your lower back hurt?
You probably don't
need an MRI,
CT scan, or X-ray.

Here's why:

- They won't help you feel better any faster.
- They have risks, including exposure to radiation.
- They aren't cheap.

What can you do to feel better? Five easy ideas are on the other side.

**Most people can get over
lower-back pain in a few weeks
by trying these steps:**

- 1 Stay active and walk.**
- 2 Use heat.**
- 3 Take non-prescription pain relievers like Tylenol®, Advil®, or Aleve®.**
- 4 Sleep on your side or your back, with a pillow between or under your knees.**
- 5 Ask your doctor about acupuncture, massage, yoga, or physical therapy.**

There are still times when you might need an imaging test. Talk to your doctor about your symptoms to find out if you need imaging tests – or if you can wait to see if you just get better with time.
